NOTES

1) Sensor and interface for correct barometric pressure compensation.
2) Prolonged operation below 0.1% O_2 can damage the sensing element.
3) Analogue output variants accuracy stated is valid when calibrated at the default calibration value. RS485 variant accuracy stated is valid when calibrated at the default 20.7% O_2 over the range 0.1 to 25% O_2. For maximum accuracy above 25% O_2 the interface and sensor should be calibrated to full scale of the required range using certified gas.

Notes:

1. Output pins 1 through 5, refer to appropriate SST oxygen sensor datasheet for wiring/pin designations.

2. Every SST oxygen sensor has two heater connections which should be connected to pins 1 & 2 of the OXY-LC; the heater coil has no polarity. However when connecting to a sensor where the sensor housing is one of the heater connections, pin 2 of the OXY-LC should be connected to the housing.

⚠ CAUTION

Do not exceed maximum ratings and ensure sensor(s) are operated in accordance with their requirements.

Carefully follow all wiring instructions. Incorrect wiring can cause permanent damage to the device.

Zirconium dioxide sensors are damaged by the presence of silicone. Vapours (organic silicone compounds) from RTV rubbers and sealants are known to poison oxygen sensors and MUST be avoided.
Do NOT use chemical cleaning agents.

Failure to comply with these instructions may result in product damage.
