

BETTER SWITCHES

## MULTIPLE POSITION SWITCHES FMV

## General features

The FMV series vertical mounting multiple position switches, are an important accessory in the automatic production process for monitoring the moving parts of a machine. Due to their limited dimensions in proportion to the functions performed, the multiple position switches offer the ideal solution to command automatic machines. The body of the multiple position switches is made of die cast metal alloy, while the roller plunger actuators are made of tempered steel.

## - Two different mounting brackets:

- 100 (130 for the start of the first actuators at 30 mm )
- 200 (230 for the start of the first actuators at 30 mm )

Cable entry with Pg thread and increasing diameter with the number of actuators (Pg 11 / Pg 13.5)

Two different distances between the drives:

- 12 mm
- 16 mm

The casing is closed in the lower and upper parts with metal closure plates with gasket and steel screws
